Profile

Site Reliability Engineer with 10+ years of experience in Linux, cloud infrastructure and automation. At BCW Group, I deploy and maintain blockchain validators, RPC and sentry nodes on bare-metal servers and Google Cloud. My work covers node upgrades, monitoring and production incident response. My cloud background includes OpenStack and Ceph, with hands-on experience configuring GPU passthrough for virtual machines.

Technical skills

Automation and code: Ansible, OpenStack-Ansible, Terraform, Python, Bash, Node.js, GitLab CI/CD
Linux and containers: Debian, Red Hat, Kubernetes, Docker, Podman
Cloud and virtualization: Google Cloud, OpenStack, Proxmox VE, OpenStack GPU passthrough
Observability: Prometheus, Grafana, VictoriaMetrics, ELK
Storage and networking: ZFS, Btrfs, Ceph, NFS, GlusterFS, TCP/IP, Linux network tuning

Experience

BCW Group | Site Reliability Engineer

Feb 2024 - Present

- Deploy and maintain validator, RPC and sentry nodes on bare-metal servers and Google Cloud across mainnet, testnet and pre-production environments.
- Assess network requirements and prepare node configurations and deployment procedures for Solana, Polygon, Monad, Mantra, Cardano, Midnight and Polymesh.
- Handle node upgrades, hard forks, snapshot restores and re-syncs; verify block freshness, peer connectivity and service health after changes.
- Automate node setup, service management and health checks with Python and Bash, and manage Google Cloud infrastructure with Terraform.
- Use Prometheus, Grafana and automated health checks to monitor node sync, block age, peer counts and host resources, and investigate operational alerts.
- Tune Linux kernel settings, networking and disk I/O for blockchain workloads, including Solana RPC nodes running within hardware limits.
- Configure ZFS mirrors and Btrfs RAID, manage snapshots, and troubleshoot storage capacity and performance issues.
- Build and maintain a two-node Proxmox cluster with ZFS VM storage and an external QDevice for quorum.
- Respond to production incidents, investigate root causes and document fixes; restrict monitoring access and troubleshoot abnormal network traffic.

Eranyacloud | Solutions Architect - OpenStack and Ceph Storage

Jul 2023 - Feb 2024 | Jakarta

- Designed and deployed OpenStack cloud environments integrated with Ceph storage, working with stakeholders on architecture and technical documentation.
- Maintained Ceph clusters and diagnosed OpenStack, storage and performance issues.
- Set up Prometheus and VictoriaMetrics for monitoring, alerting and long-term metrics retention.

Experience continued

GreenWeb | SRE Team Lead - Public Cloud

Aug 2021 - Jul 2023 | Mashhad

- Led reliability work for public cloud infrastructure and coordinated delivery with engineering teams.
- Used Ansible to roll out microservice updates across Linux environments of up to 2,000 servers per region.
- Built GitLab CI/CD pipelines for Kubernetes deployments and container images, and implemented Istio for traffic management, observability and security.
- Tuned NFS and Linux networking, reducing instance backup time by 20%; designed block storage infrastructure for OpenStack at 400 TB scale.
- Implemented ELK monitoring and logging for cloud services.

GreenWeb | Solutions Architect - OpenStack and Ceph Storage

Dec 2020 - Aug 2021 | Mashhad

- Deployed OpenStack with OpenStack-Ansible and designed multi-datacenter IaaS architecture for up to 2,000 servers.
- Provisioned bare-metal infrastructure with Ubuntu MAAS and integrated Ceph storage with OpenStack.
- Tuned Ceph, RabbitMQ and Galera, and troubleshot Nova, Neutron, Cinder, Glance and Keystone.
- Built Prometheus and Grafana monitoring and Python-based VM metering services.

GreenWeb | Cloud Researcher

Aug 2019 - Dec 2020 | Mashhad

- Researched and tested OpenStack, Kubernetes and block storage designs for GreenWeb's cloud platform.
- Troubleshot OpenStack services and automated Prometheus configuration through CI/CD.
- Tuned Galera cluster performance, reducing query execution time by 40%.

Part Software Group | Backend Developer

Feb 2016 - May 2019 | Mashhad

- Built Redis and MongoDB interfaces used by more than 100 applications.
- Developed Node.js proxy and web servers, and helped migrate monolithic services into modular applications.
- Contributed to an alternative trading system and refactored legacy backend modules.

Part Software Group | System Administrator

Jan 2013 - May 2016 | Mashhad

- Administered SmartOS and Linux systems, including BIND, Squid, NFS, GitLab, ownCloud, FreeRADIUS and DRBD.
- Built Alpine-based Docker images and resolved RabbitMQ queue performance issues.

Education

Master's degree in Artificial Intelligence | Islamic Azad University, Mashhad
2017 - 2020 | GPA: 17.60/20

Bachelor's degree in Computer Engineering | Motahar University, Mashhad
2012 - 2014 | GPA: 16/20

Certification and training

Google Cloud Certified Professional Cloud Architect | Credential

Training: Certified Kubernetes Administrator course, Google Cloud, cloud security and CEH.

Languages: Persian, English
