## Profile

SRE and DevOps engineer with 10+ years of experience in Linux, public cloud infrastructure and automation. Background in multi-region OpenStack, Ceph storage, GPU infrastructure for AI workloads and Kubernetes. Combines infrastructure design and team leadership with hands-on production operations on bare-metal servers and Google Cloud. Currently operates blockchain infrastructure at BCW Group.

## Technical skills

**Cloud and virtualization:** OpenStack, Google Cloud, Proxmox VE, Ubuntu MAAS
**Automation:** Ansible, OpenStack-Ansible, Terraform, GitLab CI/CD
**Linux and code:** Debian, Red Hat, Python, Bash, Node.js
**Containers:** Kubernetes, Docker, Podman, Istio
**Observability:** Prometheus, Grafana, VictoriaMetrics, ELK
**Storage and networking:** Ceph, ZFS, Btrfs, NFS, GlusterFS, TCP/IP

## Selected infrastructure projects

- **Multi-region OpenStack:** Deployed cloud infrastructure across three regions using Ansible for repeatable deployments and consistent configuration.
- **GPU infrastructure for AI:** Configured GPU PCI passthrough for OpenStack virtual machines, providing AI workloads with direct access to physical GPU hardware.
- **Ceph storage:** Deployed and maintained Ceph clusters integrated with OpenStack block storage, covering cluster health, capacity planning and performance tuning.

## Experience

### BCW Group | Site Reliability Engineer

Feb 2024 - Present

- Deploy and maintain validator, RPC and sentry nodes on bare-metal servers and Google Cloud across mainnet, testnet and pre-production environments.
- Assess network requirements and prepare node configurations and deployment procedures for Solana, Polygon, Monad, Mantra, Cardano, Midnight and Polymesh.
- Handle node upgrades, hard forks, snapshot restores and re-syncs; verify block freshness, peer connectivity and service health after changes.
- Automate node setup, service management and health checks with Python and Bash, and manage Google Cloud infrastructure with Terraform.
- Use Prometheus, Grafana and automated health checks to monitor node sync, block age, peer counts and host resources, and investigate operational alerts.
- Tune Linux kernel settings, networking and disk I/O for blockchain workloads, including Solana RPC nodes running within hardware limits.
- Configure ZFS mirrors and Btrfs RAID, manage snapshots, and troubleshoot storage capacity and performance issues.
- Build and maintain a two-node Proxmox cluster with ZFS VM storage and an external QDevice for quorum.
- Respond to production incidents, investigate root causes and document fixes; restrict monitoring access and troubleshoot abnormal network traffic.

### Eranyacloud | Solutions Architect - OpenStack and Ceph Storage

Jul 2023 - Feb 2024 | Jakarta

- Designed and deployed OpenStack and Ceph environments, documented architecture and resolved cloud and Linux infrastructure issues.
- Implemented Ceph clusters for OpenStack block storage; planned capacity, monitored cluster health and tuned storage performance.
- Implemented Prometheus and VictoriaMetrics for monitoring, alerting and long-term metrics retention; tuned query and storage performance.

### GreenWeb | SRE Team Lead - Public Cloud

Aug 2021 - Jul 2023 | Mashhad

- Led public cloud reliability and infrastructure delivery, and implemented ELK monitoring and logging.
- Automated microservice updates with Ansible for up to 2,000 Linux servers per region.
- Built GitLab CI/CD pipelines for Kubernetes deployments and container images, and implemented Istio for traffic management, observability and security.
- Designed OpenStack block storage at 400 TB scale; tuned NFS and networking to cut instance backup time by 20%.

### GreenWeb | Solutions Architect - OpenStack and Ceph Storage

Dec 2020 - Aug 2021 | Mashhad

- Deployed OpenStack with OpenStack-Ansible and designed multi-datacenter IaaS architecture for up to 2,000 servers.
- Integrated Ceph with OpenStack block storage and tuned virtual machine storage performance.
- Provisioned bare-metal infrastructure with Ubuntu MAAS.
- Tuned RabbitMQ and Galera, and troubleshot Nova, Neutron, Cinder, Glance and Keystone.
- Built Prometheus and Grafana monitoring and Python-based VM metering services.

### GreenWeb | Cloud Researcher

Aug 2019 - Dec 2020 | Mashhad

- Researched OpenStack, Kubernetes and block storage; tested configurations and resolved service issues.
- Automated Prometheus configuration with CI/CD; tuned Galera to reduce query execution time by 40%.

### Part Software Group | Backend Developer

Feb 2016 - May 2019 | Mashhad

- Built Redis and MongoDB interfaces for 100+ applications and shared Node.js proxy and web servers.
- Developed trading-system components and migrated monolithic Node.js services into modular applications.

### Part Software Group | System Administrator

Jan 2013 - May 2016 | Mashhad

- Administered SmartOS/Linux, BIND, Squid, NFS, GitLab, ownCloud, FreeRADIUS and DRBD.
- Built Alpine-based Docker images and tuned RabbitMQ queues.

## Education and credentials

**Master's in Artificial Intelligence** | Islamic Azad University, Mashhad | 2017 - 2020

**Bachelor's in Computer Engineering** | Motahar University, Mashhad | 2012 - 2014

**Google Cloud Certified Professional Cloud Architect** | Credential

Training: Certified Kubernetes Administrator course, Google Cloud, cloud security and CEH.

**Languages:** Persian, English
